Outline

Background

Method

Conclusion

Motivation

- State the research question or presentation context.
- Use **highlighted keywords** for important terms.
- Keep each slide focused on one main message.

Problem Statement

Core question

What problem is being solved, and why does it matter?

A concise formulation can be written as

$$\hat{\theta} = \arg \min_{\theta} \mathcal{L}(\theta; X, y).$$

Workflow

1. Prepare the input data.
2. Define the model or analytical method.
3. Evaluate the result with clear metrics.

Result Summary

表: Example table

Method	Metric A	Metric B
Baseline	0.71	0.68
Proposed	0.84	0.79

Key Takeaways

- Summarize the most important finding.
- Explain the practical implication.
- End with one concrete next step.
